

RELAY 24V 2X15A NO

Art.no: 16-990681-24

Normally open relay with resistor. The resistor is used to suppress voltage spikes that may occur when the relay is activated or deactivated. This helps protect sensitive equipment, such as PLC controllers, from potential damage.

Connections:

- 85: Ground (negative)
- 86: Control signal (activation)
- 30: Power input
- 87 & 87b: Relay outputs (max 15 A per output)

When activated, both 87 and 87b are connected to terminal 30. The relay does not switch between these outputs – both are live simultaneously when the relay is activated.
